Empathy Map

Date	29 September 2026
Team ID	SWTID-2026-9550
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand the ServiceNow administrator or authorized user from four perspectives – what they Say, Think, Do, and Feel – in relation to the access-control problem addressed by the Script-Controlled ACL project.

SAYS

- I need to control who can access records.
- Users should see only the records they are authorized to view.
- Different roles should have different permissions.

THINKS

- Record access must be controlled securely.
- ACL conditions and scripts should work correctly together.
- Unauthorized users should not access sensitive records.

PERSONA

ServiceNow Administrator / Authorized User

DOES

- Creates users, roles and the Institution Details table.
- Configures Read, Create, Write and Delete ACLs.
- Tests access by impersonating users with different roles.

FEELS

- Secure when unauthorized access is blocked.
- Confident when authorized users can perform required operations.
- Assured when ACL behavior is verified successfully.
