SMARTBRIDGE
Let's bridge the gap

SKILL WALL
A SmartBridge Project

Project Initialization and Planning Phase

Date	29 September 2026
Team ID	SWTID-2026-9550
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Create a problem statement from the perspective of the ServiceNow administrator or authorized user. The project focuses on controlling access to Institution Details records based on field values and user roles. The statement helps identify the security challenge of allowing authorized users to access the required records while preventing unauthorized viewing, creation, modification, and deletion.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A ServiceNow administrator managing institution records.	Control access to student/institution records based on Branch and user roles.	Users with different roles should have different permissions for viewing, creating, editing and deleting records.	Institution records may contain sensitive information and unauthorized access must be prevented.	Confident that records are securely protected while authorized users can perform their required tasks.

Project focus: The project uses Script-Controlled ACLs for Read, Create, Write and Delete operations. The Read ACL uses the Branch field and the bb1 role, while additional roles bb2, bb3 and bb4 control Create, Write and Delete operations respectively.
